Incident Type	Suspicious Outbound Network Traffic with Potential Data Transfer. Query Context: download report Source IP: 34.131.196.56 Destination IP and Port: 23.64.59.75 : 443

2. Incident Evidence and Detail:

The provided network logs reveal a series of allowed outbound connections from internal host 10.100.50.52 to multiple external IP addresses, including 34.131.196.56 (New Delhi, IN) on port 8000 and several cloud/CDN endpoints (e.g., 162.159.142.207, 99.86.30.112) on port 443. The bidirectional traffic with 34.131.196.56 on a non-standard port (8000) is particularly notable, as it may represent a custom application or service facilitating report downloads or data transfers. The consistent pattern of allowed connections suggests either a scheduled task, user-initiated bulk download, or automated synchronization process. No overtly malicious indicators are present, but the volume and destination diversity warrant further scrutiny to rule out unauthorized data exfiltration.

Threat Intel:

Non-standard ports (e.g., 8000) are often leveraged by legitimate applications but can also be exploited for covert data transfers. The New Delhi-based IP (34.131.196.56) has no known malicious reputation in threat intelligence feeds, though geolocation mismatches with expected business operations may indicate third-party service usage or potential shadow IT. Cloud/CDN endpoints (e.g., Cloudflare, AWS) are commonly used for legitimate content delivery but can also serve as command-and-control (C2) infrastructure for adversaries.

5. Strategic Recommendations & Action Plan

- o Validate legitimate network traffic flows.
- o Apply least privilege rules to firewall policies.
- o Monitor infrastructure for suspicious lateral patterns.
